**Skill of the bi-month:**

- Majority of meeting spent touring Woodland Valley Road. Several sites along road provided opportunity to discuss stream management practices. At a large woody debris site, group discussed best practices for sizing creeks for restoration work. Reviewed the use of the USGS streamstats web site for determining the size of the watershed and the meaning of bankfull measurements. Second site on Woodland Road provided opportunity to discuss possible stream stabilization solutions. Group reviewed plan sets provided from NRCS for bank stabilization and reviewed practices installed at the Fawn Hill project site. Last stop on the tour included a review of a recent flood damage repair completed during 2010 floods.
